Wizard of Oz User Tasks

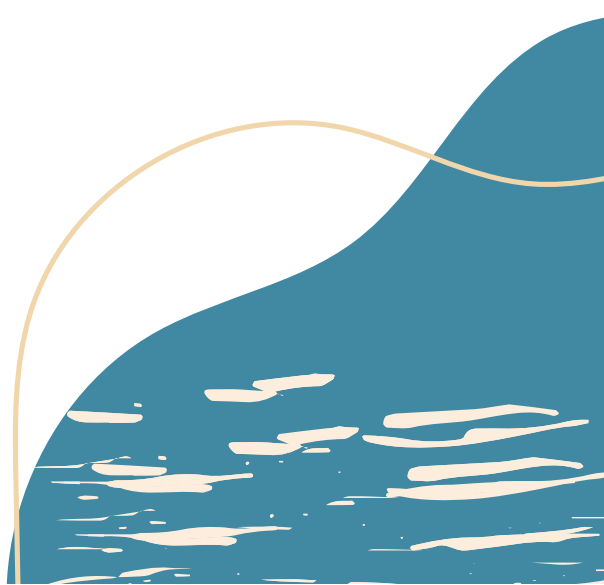

Wizard of Oz - Preparation for User Evaluation

We started by giving an overview of how the user evaluation worked, a general explanation of the goals behind the application and that we would be taking notes and observing the process.

The users were then presented with a hand-written list of tasks, such that they could check anytime they wanted and could keep track of each task they were performing.

Prior to starting, we told the users that we were not going to indicate to them what to do in each task, neither explain how the interface worked; on the contrary, we wanted to understand if they could accomplish the objectives with the tested interface.

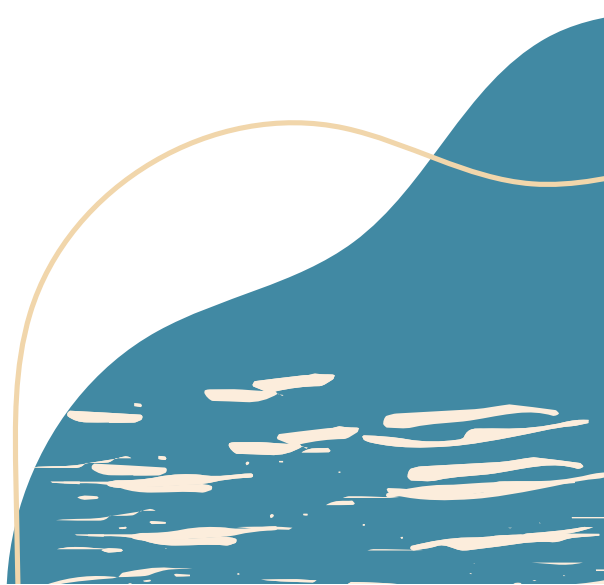

We encouraged them to "think out loud" and express their thought process throughout the testing.

User Tasks

Imagine your an user called Mauricio Ruiz. Attempt to perform the following tasks:

1. Access the application by signing-up
 2. Go to the personal area and complete your profile
 3. In the main page, go to the budget area of the application
 4. Get access to your expected monthly expenses information
 5. Check the personal history and return to the main page
 6. Go to the savings planner and add 1000 euros to your savings
 7. Alter your current goal of coming to Portugal to be 4 months
 8. Check your savings breakdown of the current goal
- 

User Tasks

From the tasks listed above, 1-3 tested if the users were able to navigate through the different sections of our application, namely getting through the initial log-in, sign-up and introductory section of the app.

We considered the tasks 4-8 to be the most critical, since these contained and reflected the most important aspects behind our application, such as seeing, understanding and navigating through the main menu, the monthly expected expenses overview section, and the savings planner.
